

The Infographic shown on the side is a statistical infographic.

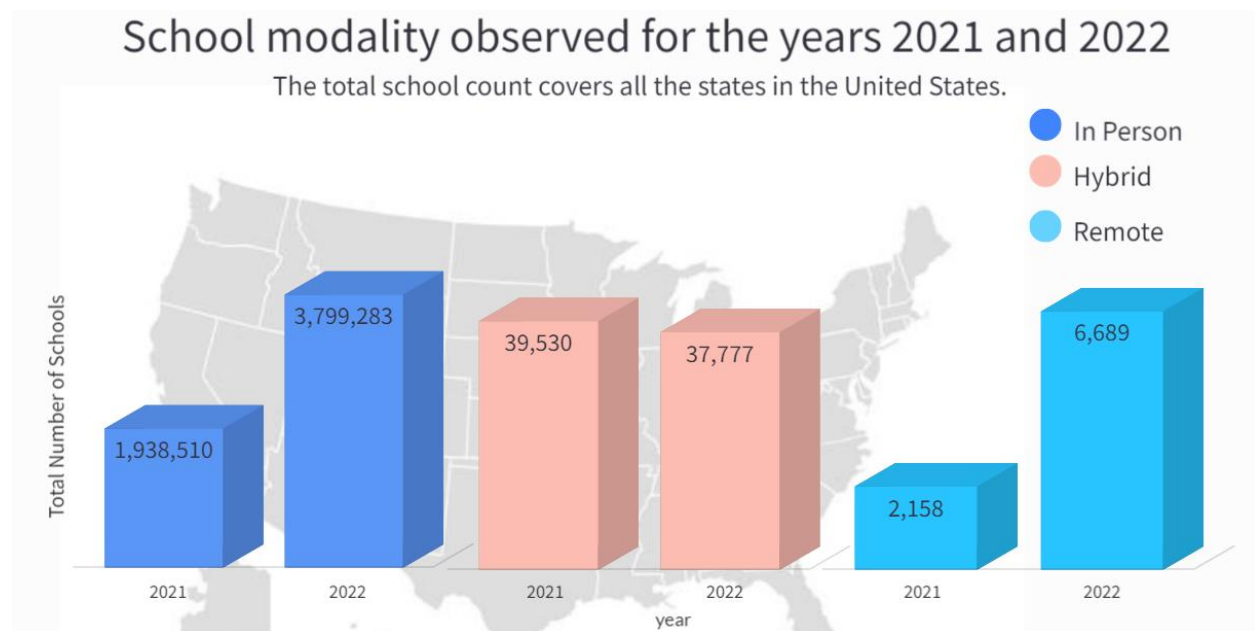

- This infographic aims to showcase various observations regarding school learning modalities because of their importance during and post-pandemic transition.
- Presented five different points of analytical observations using photographs, graphs, and other icons
- The data used to showcase the stats had two years of data belonging to 2021 and 2022 and had data points like dates, state, zip code, number of students, number of schools, and modality.
- Tool used to build the infographic was Visme.com

I will be describing the infographic in different parts. This will help in seeing a clear image in each portion.

The above image is the heading or the introduction of the infographic. It describes the importance of the topic in the current time.

The section of the infographic above demonstrates the change in the modality from 2021 to 2022. It uses the number of schools that have followed a specific modality to compare.

Largest Student groups that adhered to schooling modality

In Person

483,234 students
from 782 schools
Los Angeles,
California.

Hybrid

347,484 students
from 649 schools.
Chicago,
Illinois.

Remote

292,518 students
from 849 schools.
Hato Rey,
Puerto Rico.

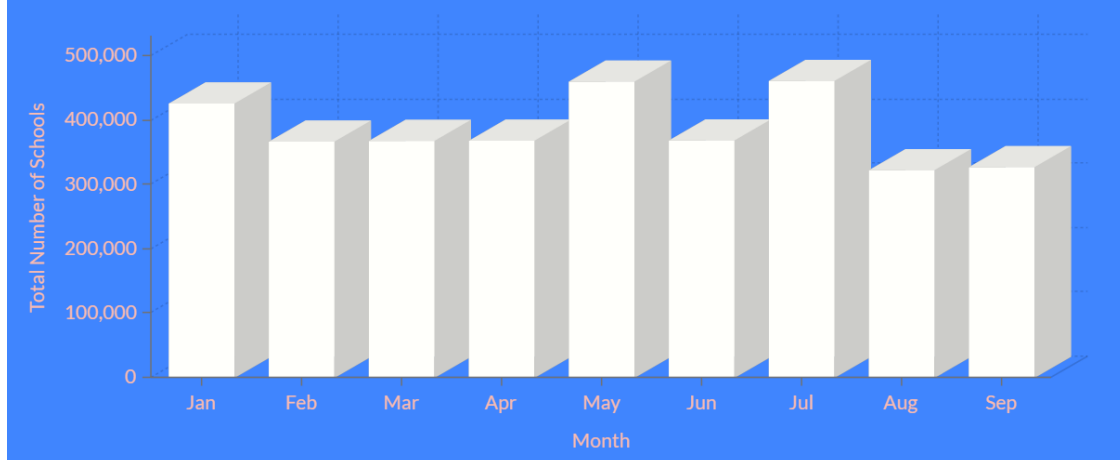

The portion of the infographic above gives the stats of the highest student who were part of the specific modality and the state district. For example, 482,234 is the highest number of students who belong to a district in Los Angeles, California, and they belonged to 782 schools that were participating in the In-Person modality of learning over the last two years. Similarly calculated for Hybrid and Remote modalities.

Percentage of schools in various modalities in September 2022

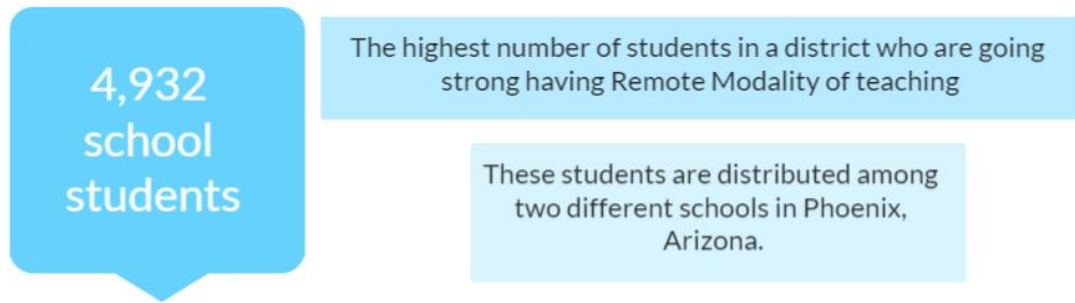

The above module portrays the percentage of student studying in a specific modality among the total student studying in the United States in the most recent month of September 2022.

2022 Stats of Number of Schools who used In-Person Modality every Month

The above section shows the change in the participation of the student in 2022 in the modality of the In-Person classes. It shows from the start of the year to the most recent data available, that is, in September.

The number of students indicates the number of students who are continuing to be present in the remote modality until the recent time, and they belong to Phoenix in Arizona state.
